Pred. No. is the number of results predicted by chance to have a em_htgo_hum:*
em_htgo_mus:*
em_htgo_other:*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to a 1526 bp Psychrobacter pacificensis 16s rDNA sequence (AAC87531) and an oligonuclectide probe (AAC87532) comprising part of the Psychrobacter pacificensis 16s rDNA sequence which are used for monitoring the growth of psychrophilic bacteria and the circulation of deep-sea water. Psychrobacter pacificensis is an aerobic, cam-negative, non-motilie, non-spore-forning oxidase-positive bacterium criginally isolated from the Japan Trench. The invention also relates to a novel method for detecting or specifically identifying Psychrobacter pacificensis, Psychrobacter glacinhola, and related species, or psychrobacter pacificensis only via the use of the 16s rDNA sequence. The specific detection of Psychrobacter pacificensis to study cand monitor its growth as an indicator of the circulation of deep-sea specific after the needing of the invention is rapid, accurate and has high sensitivity, and removes the need to separate and culture the biological materials. The present sequence represents a specifically claimed psychrobacter pacificensis 16s rDNA oligonucleotide probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA probe originating from psychrotrophic bacterium applicable in species-specific detection of the microorganism as indication in studying and monitoring its growth and circulation of deep-sea water with sensitivity.

The invention relates to a 1526 bp Psychrobacter pacificensis 16S rDNA sequence (AAC87531) and an oligonucleotide probe (AAC87532) comprising part of the Psychrobacter pacificensis 16S rDNA sequence which are used for monitoring the growth of psychrophilic bacteria and the circulation of deep-sea water. Psychrobacter pacificensis is an aerobic, Gram-negative, non-motile, non-spore-forming oxidase-positive bacterium originally isolated from the Japan Trench. The invention also relates to a novel method for detecting or specifically identifying Psychrobacter pacificensis, Psychrobacter glacincola, and related species, or psychrobacter pacifically identifying Psychrobacter pacific and readilensis only via the use of the 16S rDNA sequence and derived oligonucleotide probe are useful for the species-specific detection of Psychrobacter pacificensis to study and monitor its growth as an indicator of the circulation of deep-sea water. The method of the invention is rapid, accurate and has high sensitivity, and removes the need to separate and culture the biological materials. The present sequence represents the Psychrobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       vulnerary, antiposciatic; antiparkinsonian; noctropic; neuroprotective; auticonvulsant; osteopathic; antiparkinsonian; noctropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunostupunostunulant; thrombolytic; coagulant; vascuropic; antidiabetic; antianacive; dermatological; immunosuppressive; antidiabetic; antianacin; gene therapy; cancer; proliferative disorder; propertive disorder; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;

isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antimifammatory; antiloer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer,
                                                                                                                                                                                                                                                                                   Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22092 - AAF22040 and AAB59129 which are used in the
                                                                                                   New human breast and ovarian cancer associated gene sequences and the oblypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,

                                                                                                                                                                                                                                                                                                                                                                                            antiinflammatory; antibacterial; antiviral; antifugal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders; osteoarthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  graft vs host disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus errythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, astima, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                      AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nootropic; neurpprotective; antiviral; antiallergic; hepatitropic; antidiabetic; antiinflammatory; antiuloer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; immune disorder; Addison's disease; allergy; autoimmune haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis; cardiovascular disorder; wound healing; neurological disease; ds.

WPI; 2001-476161/51 P-PSDB; ABB10350.

Isolated nucleic acid molecule encoding an inflammation-associated polypeptide is used in preventing, treating or ameliorating a medical condition

Claim 1; SEQ ID NO: 238; 859pp + Sequence Listing; English.

The present invention provides human cDNAs, proteins and related genomic DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence

The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allerques, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple scalerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel genes (ABV83682-ABV84101) and proteins (ABP66710-ABP67129) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel polypeptide useful for diagnosis, prognosis, prevention, and treatment of immune, hyperproliferative, renal, respiratory, cardiovascular, reproductive, endocrine, gastrointestinal and neurological disorders.

The invention comprises human nucleotide sequences which are co-expressed with matrix-remodeling genes. Matrix-remodeling is associated with the construction, destruction and reorganisation of extracellular matrix components. The matrix-remodeling-associated nucleotides of the invention are useful for screening for and purifying ligands that specifically bind to the nucleotides of the invention me matrix-remodelling-associated nucleotides of the invention are also useful in the diagnosis, prevention, treatment and evaluation of therapies for diseases associated with matrix remodelling (e.g. angiogenesis, arthritis, atherosclerosis, cancer, cardiomyopathy, diabetic necrosis, fibrosis and ulceration). The present DNA sequence represents a human matrix-remodeling-associated
                                                                                                                                                                                                                                                   New isolated polynucleotide coexpressed with matrix-remodeling genes, useful in diagnosis, prognosis, prevention and treatment of diseases associated with matrix-remodeling such as angiogenesis, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; PRO polypeptide; membrane bound protein; receptor; diagnosis;

This sequence was identified from the Incyte clone 3946114. The spene, protein, and antibody sequences can be used in the diagnosis, and treatment or prevention of a disease associated with its altered expression. The diseases that can be treated are matrix-remodaling diseases, including cancer, cardiomyopathy, arthritis, anglogenesis, diabetic necrosis, atherosclerosis, fibrosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; ds; matrix-remodeling gene; extracellular matrix; gene; matrix-remodeling-associated disease; sorcening; arthritis; matrix remodelling-associated disease; andiogenesis; arthritis; atherosclerosis; cancer; cardiomyopathy; diabetic necrosis; fibrosis;

AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAX99465. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Smith V, Watanabe CK,

The present invention describes an antibody that binds to a human protein (I) selected from: PRO381; PRO1269; PRO1409; PRO1755; PRO1409; PRO3419; PRO3444; PRO4444; PRO4444; PRO44407; PRO34567; PRO1269; PRO1269; PRO12602. (I) has anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells. Increased expression of genes encoding (I) can also be detected to diagnose tumours. Agents which inhibit the activity of (I). especially the antibodies, or an antisense oligonucleotide which hybridises to genes encoding (I). can be used to inhibit tumour growth, preferably by inducing cell death. Methods from the present invention can be used to identify compounds which inhibit the biological activity of (I). Act58019 to Act58102 represent PCR primers and hybridisation probes used in examples from the present invention for human PRO sequences. AAC58103 to AAC58122 and AAB24021 to AAB24040 represent human PRO PONDIVIDE CENTER AABCA1021 to A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of amilisense RNA and DNA. They may also be used used to generate either transgent animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to secreted and transmembrane proteins

Claim

```
The present sequence encodes a novel metastatic thyroid cancer (MTC) protein. A method of categorising, diagnosing or assessing the prognosis of thyroid carcinoma by measuring the expression levels of MTC genes is disclosed. The MTC genes are differentially expressed in metastatic thyroid cancer when compared to non-metastatic thyroid cancer. An agent that decreases the expression or activity of one or more MTC genes may be administered to treat metastatic carcinoma. Allele-specific oligonuclectide probes that hybridise to an MTC polynuclectide at a polymorphic site may be used to determine whether a subject suffers from or is at risk of metastatic thyroid carcinoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        comprises: (a) an oligo-dT primer sector. Or Where a primer sector full-length coNRs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of a follogonucleotide comprision as sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprision a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 5'-end sequence complementary to a polynucleotide which comprises a 5'-end sequence. Oligonucleotide which comprises a 1'-end sequence complementary to a polynucleotide comprises a 1'-end sequence is selected from those defined in the 5'-end sequence; at least 15 nucleotides and the combination of the 5'-end sequence; the primer sets can be used in antisense therapy and the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNBs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNBs. The primers are also useful for the connection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNBs. The primers also useful for the full-length cDNBs encoded by the full-length cDNBs encoded sequences; AAH18328 and AAH18312 represent human cDNB sequences; AAH3828 and AAH18331 con AAH18341 represent human cDNB sequences; AAH18341 represent human cDNB sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonuclectides, all of which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
which represent the human OREX open reading frames 1 to 3161. The OREX
sequences have activities such as: eyfostatic; hepatotropic; vulnerary;
antiposoriatic; antiparkinsonian; noctropic; neuroprotective;
osteopathic; anticonvulsant; antiarthritic; immunosuppressant;
immunostimulant; antiant; thrombolytic; osgallant; vasatoropic;
antidiabetic; hypotensive; dermatoholytic; orgallant; antitheumatic;
antidiabetic; hypotensive; dermatoholytic; orgallant or determining
the presence of or predisposition to, or preventing or treating
the presence of or predisposition to, or preventing or treating
the presence of or predisposition to, or preventing or treating
the presence of or predisposition to, or preventing or treating
vectors. The proteins associated with an OREX-associated disorder. The
nucleic acids can be used to express OREX proteins in gene therapy
vectors. The proteins and nucleic acids may be used to treat cancers,
proliferative disorders, neurodegenerative disorders, osteoarthritis,
therefore a cardiovascular disease, diabetes mallitus,
hypertension, hypothyroidism, cholesterol-ester storage, systemic lupus
allergies, aplastic anaemia, burns, wounds, bone and cartilage damage,
nocturnal haemoglobinuta, antiinflammatory disease; to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó

The present sequence is human protein with hydrophobic domain encoding CDNA clone HP10769. The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The polynucleotides and its complementary sequences may also be used as antigens in the production of antibodies only peptides may also be used as antigens in the production of antibodies and in assays to identify modulators of polypeptide expression and cityity. The polypeptides and nucleic acids may be used as nutritional supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of microbial infections and autoimmune disorders such as multiple sclerosis, rheumatopolesis, to modulate tissue growth activity (e.g. for the heamatopolesis, to modulate activin and inhibin activity (e.g. for the catment of Parkinson's disease, Huntington's disease and Alzheimer's disease), to modulate activin and inhibin activity (e.g. for the fertility), to modulate chemctactic and chemckinetic activity, to modulate receptor.
        autoimmune disorder; antimicrobial;
cell proliferation; immunomodulatory; autoimmune disorder; antimicrobial, multiple sclerosis; rheumatoid arthritis; insulin-dependent diabetes; hamatopolesis; tissue growth activity; Parkinson's disease; cytostatic; Huntington's disease; Alzheimers' disease; chemotactic; chemokinetic; hamanostatic; thrombolytic; tumour growth inhibitor; anabolic; contraceptive; antiinfertility; antiinflammatory; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ligand activity, to modulate inflammation and to inhibit tumour growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human proteins with hydrophobic domains and the nucleic acids encoding them, useful for preventing diagnosing and treating e.g. cancer, Alzheimer's and inflammation -
